

CONTINUOUS DEPLOYMENT & WORKFLOW

guided notes

CONTINUOUS DEPLOYMENT & WORKFLOW

What are the NEW steps of your SUPER professional deployment workflow? Fill in the missing pieces:

- Make changes locally
-
- Push to staging
-
-
- Get client approval
-
- Voila!

This is a diagram of your new professional deployment workflow. Label each section:

1. Your local machine

2.

3.

Now define (in one sentence) what each stage is:

1.

2.

3. Production / Live:

Once you have implemented your new deployment process, how many remote repositories will you have?

Hint: use the command `git remote -v` to list them all

What do you need to do in order to deploy your changes from staging to the LIVE production site? Circle the right answer

- A. Log into your staging WordPress admin dashboard
- B. Log into your production WordPress admin dashboard
- C. Log into your server via FTP
- D. Push your changes from your local machine to your LIVE server
